# Basic Information about Scrum

## Scrum as an agile development method

### Requirements for agile software development:

- *Individuals and Interactions* are more important than *tools* and *processes*.
- *Well-functioning programmes* are more important than *detailed documentation*.
- *Continuous cooperation with customers* is more important than *contracts*.
- *Courage and openness for changes* is more important than acting upon a *fixed plan*.

## What characterises Scrum?

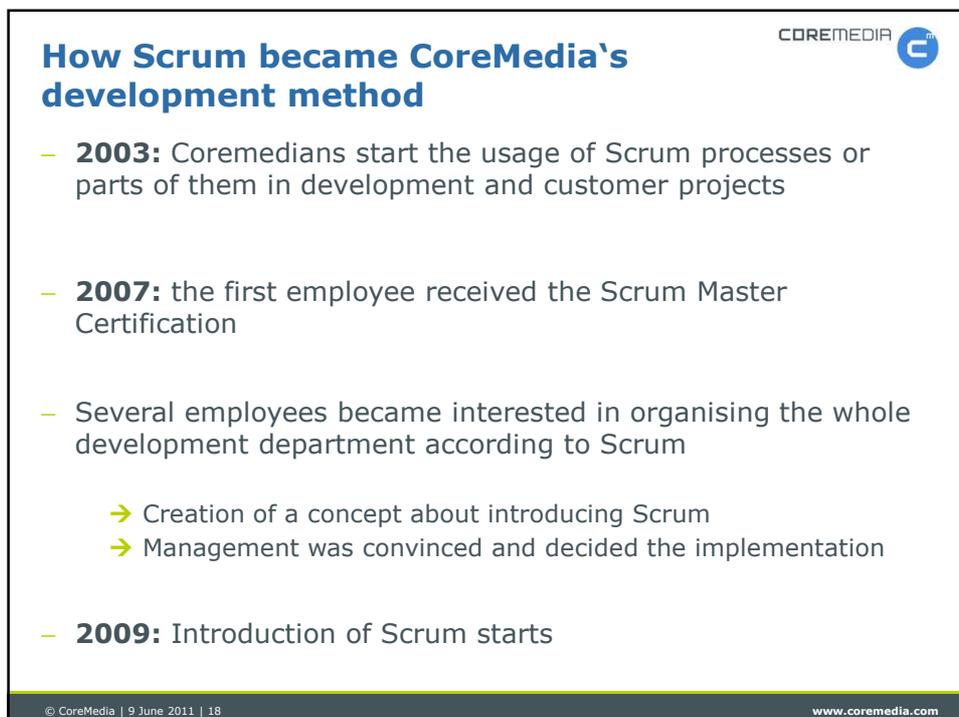

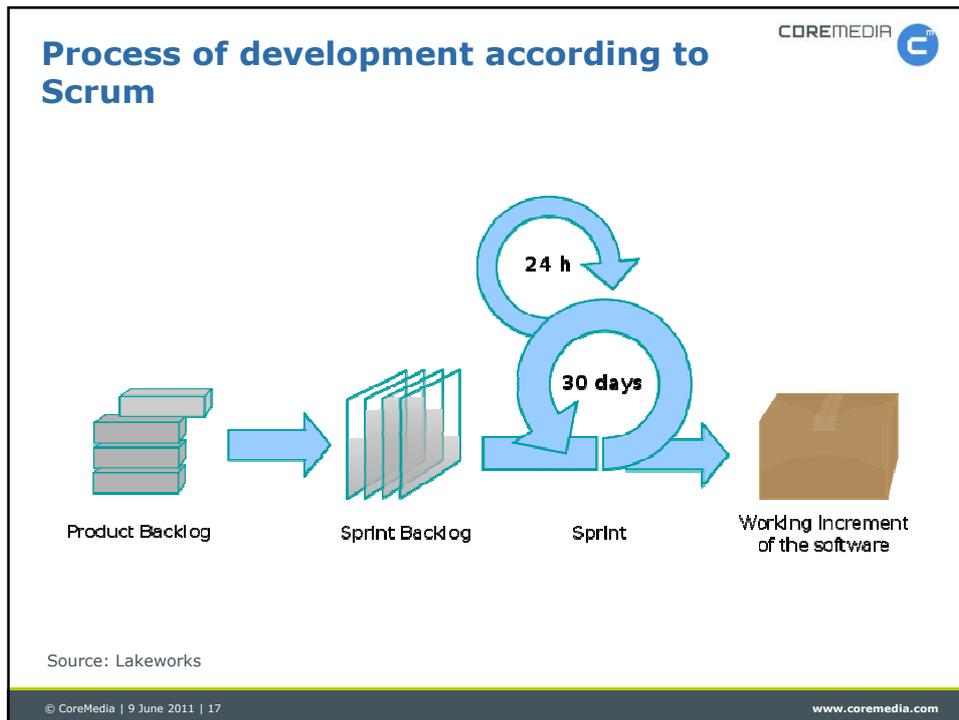

Different roles within a Scrum-development-team:

- The **Scrum Master** is responsible for the processes
- The **Product Owner** represents the voice of the customer
- The cross-functional **team** delivers the product
